उत्तराखंड जैसे दुर्गम क्षेत्र वाले राज्य में भी कोरोना वैक्सीन की पहली डोज़ सभी पात्र लाभार्थियों को लग चुकी है। PM @NarendraModi जी के मार्गदर्शन में हम निरंतर इस लड़ाई में मज़बूत हो रहे हैं।

इस उपलब्धि का श्रेय स्वास्थ्य कर्मियों एवं राज्य के प्रसाशन को जाता है। सभी को बधाई!

Health Infrastructure Mission

Dr Mansukh Mandaviya wrote an article on how PM Ayushman Bharat Health Infrastructure Mission is making India self-reliant in healthcare.

Hindustan Times How India is becoming self-reliant in health care

The coronavirus pandemic presented to us a set of complex challenges, demanding a prompt response to the evolving situation in a manner that also facilitated rapid scaling up of the public health infrastructure, with an approach calibrated to the varying maturity of health systems across India. The emergency reiterated the need for a concerted and "whole of government" and "whole of society" approach to building comprehensive, robust, and prompt response systems. While the pandemic highlighted the importance of public health care, it also allowed us to understand the key strengths and weaknesses of the system.

We realised that significant investment is needed to strengthen health infrastructure, surveillance, and research capabilities, build the capacity to respond to outbreaks/disasters, and ensure the availability of essential services during such times. Such a response will also complement the country's journey towards achieving the targets of the National Health Policy 2017 and the Sustainable Development Goals.

The ₹64,180-crore Pradhan Mantri Ayushman Bharat Health Infrastructure Mission (PMABHIM)

tics and surveillance. This will contribute to building a self-reliant India with a comprehensive surveillance system.

During the pandemic, we also realised the severe impact on essential services in the absence of a provision of segregating a part of hospital buildings and specifically designating them for infectious diseases. To address the problem, 602 critical care blocks of 50-100 beds each will be set up in districts to enable the system to respond to health emergencies. For districts with less than 500,000 people, support is being provided by establishing referral linkages. Further, 150-bed critical care blocks in 12 central hospitals/institutions are being established. These will act as mentor institutions for providing technical assistance to states.

During Covid-19, central institutions of excellence provided mentorship to build the confidence of health care professionals and played an active role in critical- and tertiary-level health care service delivery. The institutes provide tertiary care interventions, but need strengthening to deal with infectious disease patients. The 150-bed critical care hospital blocks in 12 central institutions will also address
